Dear Hiring Manager,

I'm applying to your staff research associate opening.

I gained experience working directly with patients in a clinical setting while I worked as a Medical Assistant and working with participants in a research setting while I worked as a Research Assistant.

I also have experience working with software such as Praat, Audacity, and ELAN both in academic and in personal projects, consequently I am very eager and quick to pick up new technologies. I complemented my university education with online courses and self directed projects which gave me the knowledge and confidence to build websites with JavaScript and work as a data analyst with Python and R.

I have a keen interest in human cognition and perception as well as their related measures in the domain of language perception. It is my hope to intimately familiarize myself with brain imaging technologies such as MRI, PET, and EEG. To that end I am currently taking advanced courses on statistics and machine learning.

My long term goal is to help increase the accessibility of auditory computer interfaces to under-served populations by informing our cognition and perception of spoken language.

Thank you in advance for considering my application and I look forward to hearing from you.

Sincerely,

Ruben A. Sanchez
